

More Good News For Our Patients! “Mini” Dental Implants The Sequel

Our spring newsletter introduced **Mini Dental Implants** for denture wearers. This “lock-down” technology allows secure eating, laughing and smiling with confidence and comfort. For upper dentures, this can reduce the “bulk” which causes gagging and can interfere with taste and texture.

This procedure is a new choice for those who may have been “poor candidates” for conventional implants because of insufficient jaw bone, medically compromised health or because they were taking medications such as steroids or blood thinners.* **Mini’s** are distinguished by simple design, minimally invasive placement, immediate function and lower overall cost. For people with “problem dentures” this is truly a breakthrough!!

Okay, Chapter Two — **Mini Dental Implants** are also being used to replace single or multiple teeth and—yes—the procedure can be finished in one appointment! So why would you consider a **Mini Dental Implant?**

- 1) New tooth placed/finished in one appointment—dinner that night!
- 2) Healing begins immediately—less invasive procedure allows immediate use.
- 3) Less discomfort following procedure—no sutures or surgical area to worry about.
- 4) Alternative to bridge or partial denture.
- 5) Significantly reduced cost!

*Conventional implants are still the treatment of choice for certain situations—a consultation/evaluation is necessary to determine the right treatment option!

The FDA has accepted **Mini Dental Implants** for long term dental use and already over 10,000 have been placed with remarkable success. South Lakewood Dental is proud to be a leader in our area to offer **Mini’s** to our patients. We think it’s time for faster, simpler and less costly tooth replacement. There’s never a better time than right now to replace these missing teeth or solve that “problem denture”! Come talk to us!!
